- (54) Method of controlling fine particulate flowback in subterranean wells
- (57) A wellbore penetrating a subterraneer formetion is treated with a fluid whereby fine particulate flow-back is reduced or prevented. The method includes the steps of providing a fluid suspension including a mbdure of a particulate coated with a tacklifying compound, pumping the suspension into a subterranean formation and depositing the mbdure within the formation whereby the tacklifying compound reterds movement of at least a portion of any fine particulate within the formation upon flow of fluids from the subterranean formation in a diluent containing solution to deposit upon previously introduced particulates to reterd movement of such particulates and any fines subject to flow with production of fluids from the subterranean formation.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 97 30 7807

This arries lets the patent family members-retaing to the patent obcuments cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP tile on

The European Petert Cities is in no way liable for these particulars which are morely given for the purpose of information.

## ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 97 30 7807

This arriver less the patent fundly members-releding to the patent documents clied in the above-mentioned European search report. The members are as contained in the European Patent Office EDP the on.
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
